Reez Amor B. San Gabriel

Workflow Automation Specialist - Data and Process Analyst

Victoria, Laguna, Philippines | +63 907 970 1766 | reezsangabriel@gmail.com

Portfolio: https://reezsg.github.io/RA-portfolio/

PROFESSIONAL SUMMARY

Data and process analyst turned workflow automation specialist, with 3+ years of experience in data operations and a growing portfolio of self-directed automation projects. Bachelor of Science in Mathematics graduate, a fast independent learner who communicates clearly with non-technical teams. Currently looking for remote opportunities in workflow automation, process automation, or data analysis.

SKILLS

- Automation platforms: GoHighLevel (GHL) — workflows, trigger links, calendars/booking sync, custom fields and pipelines, conditional logic; Zapier, Make.com, n8n
- AI integration: Google Gemini, GPT-4o mini, prompt engineering, AI-based classification and scoring
- CRM and tools: Notion, HubSpot, Slack, Google Workspace, Tally, Supabase
- Core strengths: workflow design, error handling, API and webhook integration, process documentation, data quality and analysis, clear communication with non-technical stakeholders

AUTOMATION PROJECTS

5 featured automation projects, selected from a broader portfolio of 9+ builds. Full breakdowns and screenshots available in the online portfolio linked above.

AI Lead Qualification and Routing (GHL)

Tools: GoHighLevel, n8n, Google Gemini API

- Built a lead qualification pipeline that pulls form submissions from GoHighLevel, scores them with Gemini, and routes each lead as Hot, Warm, or Cold.
- Tagged leads back into GoHighLevel automatically via API so the sales team sees priority at a glance, no manual sorting.
- Result: qualification and routing happen in seconds from form submission, with zero manual review needed before a lead reaches sales.

Retention and Reputation System (Med Spa)

Tools: GoHighLevel

- Designed a full client lifecycle system in GoHighLevel: 5 custom fields, 7 tags, and a 6-stage color-coded pipeline to track clients from booking through retention.
- Built two automated workflows: a post-visit review request and a 60/90-day lapsed client reactivation sequence.
- Result: retention and review requests run without staff intervention, with lapsed clients automatically re-engaged on a fixed schedule.

Automated Client Follow-Up System (Law Firm)

Tools: GoHighLevel, Trigger Links, Calendars, Custom Fields and Pipelines

- Built 6 interconnected sequences covering the full client lifecycle: lead follow-up, appointment reminders, no-show recovery, post-consult nurture, long-term nurture, and review requests.
- Solved the core constraint of the build — the business owner never logs into GoHighLevel — using Trigger Links, so a single email click updates the CRM automatically.
- Result: a fully automated, zero-login follow-up system, with reminder timing tested and confirmed accurate against a real live booking.

Insurance Renewal Reminder Pipeline

Tools: Make.com, Google Sheets, Gmail

- Built a 7-stage automated renewal reminder pipeline for insurance brokers, triggered at 120, 90, 60, 30, 14, 7, and 0 days before policy renewal.
- Implemented two layers of error handling: missing-data diversion for incomplete records, and per-module resume logic so one failed row does not stop the full run.
- Result: tested end to end across 10 client records covering all 7 trigger stages plus edge cases, with zero renewals missed by design.

Internal Ops Request and Triage Engine

Tools: n8n (self-hosted), Slack, Google Gemini AI, Google Sheets

- Built an AI-powered Slack triage system in self-hosted n8n that automatically classifies incoming staff requests into 5 categories with an assigned priority level.
- Logged every request to Google Sheets for a full, searchable audit trail and sent automatic acknowledgments back to the requester.
- Result: instant categorized response within seconds, 100 percent of requests logged, zero manual triage required.

Additional projects (content repurposing engine, real estate lead scoring, insurance speed-to-lead system, dental clinic appointment automation, client onboarding sequence) are available in the portfolio linked above.

PROFESSIONAL EXPERIENCE

Real Estate Performance Associate (2026)

MSCI Hong Kong Limited, Makati City, Philippines

- Joined the Portfolio Quality Assurance team safeguarding data quality and accuracy across MSCI's global real estate portfolios.
- Helped build and optimize quality controls to improve data accuracy and consistency across portfolios.
- Collaborated across teams and markets in North America, Asia Pacific, and Europe, coordinating with technical and non-technical stakeholders.

Real Estate Performance Analyst (2022 to 2025)

MSCI Hong Kong Limited, Makati City, Philippines

- Managed data for a portfolio of US private equity real estate funds, ensuring accuracy and adherence to MSCI procedure and data standards.
- Contributed to process improvement initiatives, applying problem solving to identify workflow efficiencies and enhance existing processes.
- Resolved client queries and delivered bespoke analysis on request, translating technical detail into clear answers for non-technical clients.
- Built effective relationships with client coverage, research, and data teams, and delivered assigned projects to milestones.

EDUCATION

Bachelor of Science in Mathematics (2022)

Laguna State Polytechnic University, Sta. Cruz, Laguna, Philippines
